

FARAM

Archivio

All Archivio components are manufactured in steel and epoxy coated in the following finishes: black, ivory and grey. The types of opening are doors with 180° opening for units 120 – 200 cm width and sliding doors for units 120 – 180 cm width. Filing grandles are supplied with support bars for 33 – 39 cm files which allows filing across the frame or along the frame or both.

The external dimensions are the result of the optimum use of internal space obtained by an accurate study of the volumes and types of stationery normally used in offices. Internal accessories for the Archivio components are anti-tilt extractable file frames, adjustable file shelves and other everyday items. With its clean design Archivio is suitable for all Faram's operational and executive furniture ranges.

Faram can introduce modifications for the improvement of the product without prior notice. Finishes to be referred to Faram dedicated information.
