

FARAM

P450

P450 is formed by a set of modular and sectional elements.

The demountable partition, with easy connectable basic modules, resolves all problems related to dimensions, distribution and functionality. The partition can be solid, glazed or partially glazed. It can be equipped with electric cableways, storage containers, worktops and other accessories.

P450 restores to the working environment an organic arrangement of space by meeting the ever-changing needs whilst maintaining a coherent image, guaranteed by uniform office fit-out elements.

FARAM

P450

Doors

The doors, solid or glazed, are perfectly integrated to the modularity of the panels; an inspectionable module may be installed on the side of the door to provide a vertical cableway as well as housing any electric device and signal or name plates.

FARAM

P450

Storage wall

The storage wall combines the requirements for organised space with the requirements of filing and archivation. The storage units are suitable for use in offices, schools, shops, homes, laboratories, etc. The storage wall system can be perfectly integrated with the partition system having many common elements (e.g., doors and doorframes). The problems associated with proper filing and management of documents find an easy solution in the vast choice of accessories of the system. Shelves, drawers, pull-out filing frames for suspended filing and filing containers complying with DIN standards make it possible to set up an efficient and intelligently organised filing system.

Faram can introduce modifications for the improvement of the product without prior notice. Finishes to be referred to Faram dedicated information.
