P600

The P600 programme utilises a unique transparent silicone free structural glazing design for both single and double glazing applications and retains 100% reusability factor for fast track contracts.

The glazed elements are connected by transparent polycarbonate joints. Right-angle and three-way polycarbonate joints are available to connect the various structural corners.

P600

P600 wall is composed by full height and freestanding elements. The aluminium frame is varnished with epoxy powder and two PVC strips guarantee the soundproofing all around the contact edge. The glass version uses 12 mm thick temperate glass panels, the blind panales can be melamine or wood veneer panels.

**FARAM**

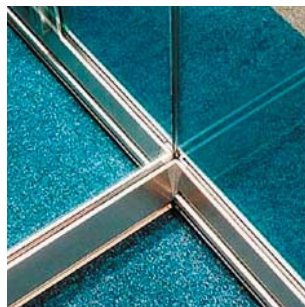

P600

There are sliding or wing glazed doors. Sliding doors are fitted with large, epoxy powder painted vertical steel tube.

The glass panels can be personalized with serigraphy or vinyl colored sheets.

The sistem is finished by a technical panel. It allows inserting external push-button panel or electrical elements. The technical panel is used like structure for the compactible wall.

Faram can introduce modifications for the improvement of the product without prior notice. Finishes to be referred to Faram dedicated information.
